| 65 years          |                   |                    |                   |         |         |         |          |              | Tdap     |                   | Influenza<br>(annually) | rZV<br>(2 doses) |

## Key:

D = diphtheria; T = tetanus; aP = acellular pertussis; IPV = inactivated polio vaccine; HepB = hepatitis B; Hib = *Haemophilus influenzae* type b; PCV13 = 13-valent pneumococcal conjugate vaccine; RV1 = rotavirus vaccine (monovalent); MenB = meningococcal B vaccine; MMR = measles, mumps and rubella; VV = varicella vaccine; d = adult diphtheria; ap = adult acellular pertussis; HPV9 = human papillomavirus (9 serotypes); rZV = herpes zoster vaccine.

- For children at high risk of pneumococcal disease, an additional dose of PCV13 is given at age 3 months.
- An alternative approved schedule for MenB given at 8 weeks (2 months), 4 months and 12 months is available.

All individuals aged from 5 years are eligible to receive two doses of a COVID-19 vaccine. Additional doses and booster doses are also available to different groups.
